

12.4 Similarity

What does it mean to be similar?

Similar or not?

True or False?

All squares are similar to each other. *true*

All isosceles triangles are similar to each other. *false*

All Pentagons with congruent angles are similar to each other. *true*

All rectangles are similar to each other. *false*

All isosceles trapezoids are similar to each other. *false*

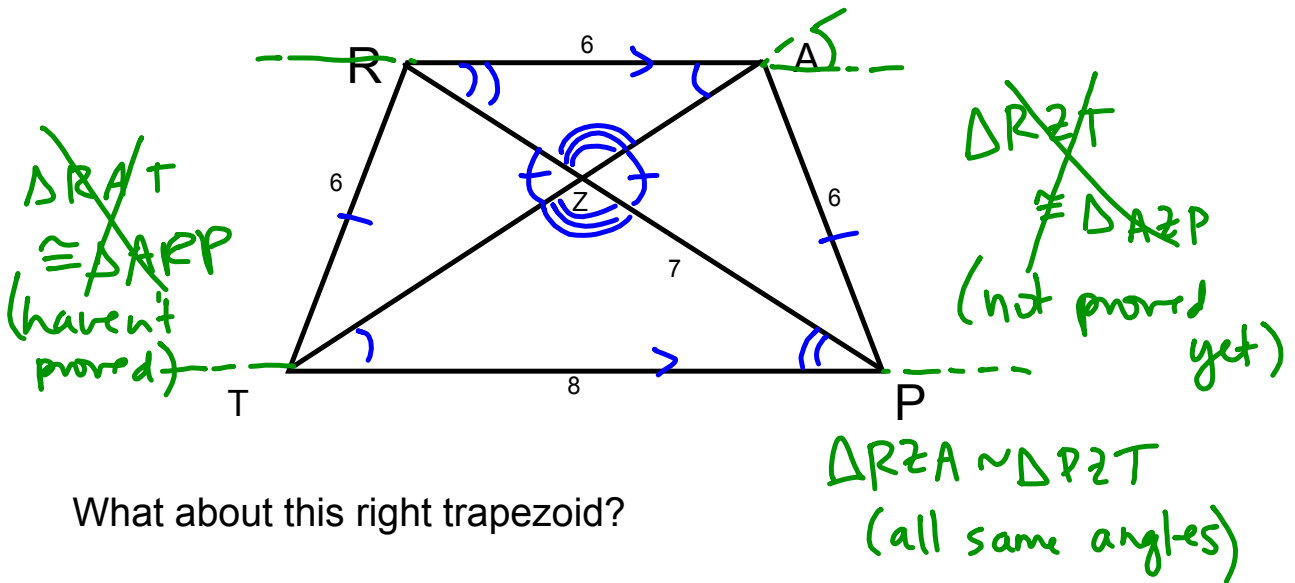

All regular hexagons are similar to each other. *true*

All circles are similar to each other. *true*

All rhombi are similar to each other. *false*

Are there any similar triangles in this Isosceles trapezoid?

What about this right trapezoid?

$\Delta RIH \sim \Delta GTH$

Similarity Theorems

AA : (angle angle) two corresponding angles are \cong , then Δ s are similar

SSS : (side, side, side) all 3 ^{corresponding} sides in the 2 Δ s are proportional w/ same scaling factor

SAS (side, angle, side w/ angle included bet. 2 sides)

if 2 corresponding sides are proportional w/ same scaling factor and the included angles are \cong .

$\triangle BAD \sim \triangle CAD$ by AA.

In the ABOVE figure, if angle ABC is congruent to angle CAD, how long is BC?

$$BC = BD - 4$$

$$\frac{x}{9} = \frac{9}{4} \quad \text{or} \quad \frac{x}{9} = \frac{9}{4}$$

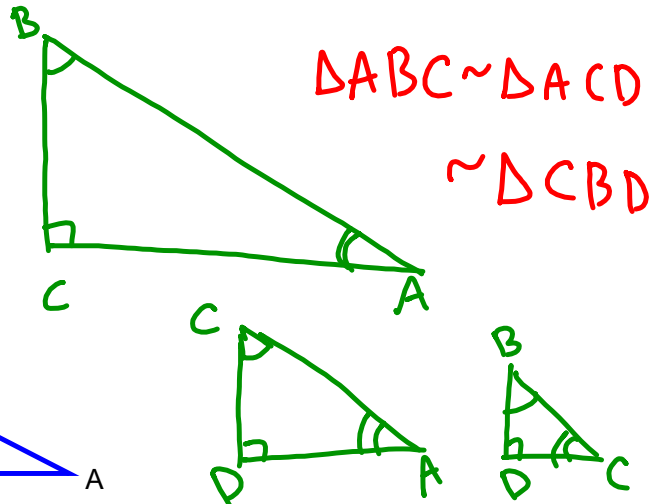

$$x = \frac{81}{4} = 20.25$$

$$BC = 20.25 - 4 = \boxed{16.25 \text{ in}}$$

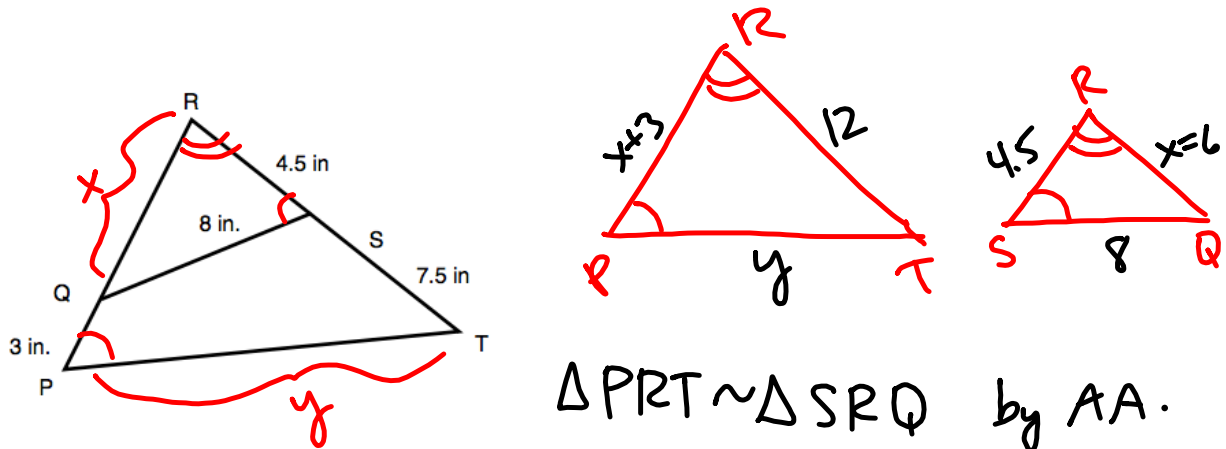

How many similar triangles are there in this picture?

$m\angle 1 + m\angle 2 = 90^\circ$
 from $\triangle ABC$, $m\angle 1 + m\angle 3 = 90^\circ$

$\Rightarrow m\angle 2 = m\angle 3$

$\triangle PRT \sim \triangle SRQ$ by AA.

In the ABOVE figure, if angle RSQ is congruent to angle RPT, how long are RQ and PT?

$$\textcircled{1} \quad x \left(\frac{12}{x} \right) = \left(\frac{x+3}{4.5} \right) x$$

$$4.5(12) = \left(\frac{(x+3)x}{4.5} \right) 4.5$$

$$54 = (x+3)x$$

$$54 = x^2 + 3x$$

$$0 = x^2 + 3x - 54$$

$$0 = (x+9)(x-6)$$

$$x+9=0 \text{ or } x-6=0$$

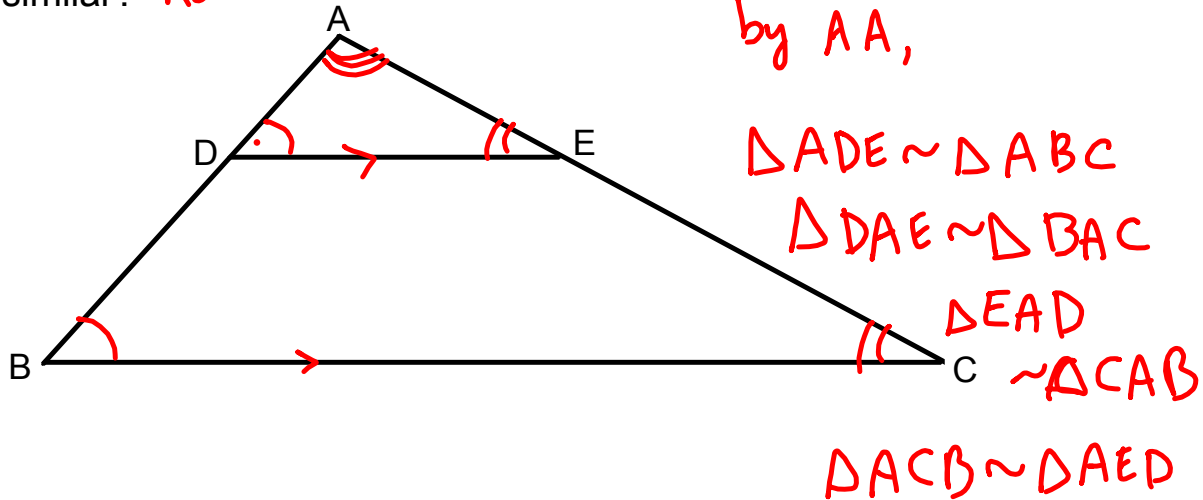

$$\cancel{x=-9} \text{ or } \textcircled{x=6} \text{ in.}$$

$$\textcircled{2} \quad \frac{12}{6} = \frac{y}{8}$$

$$2(8) = y$$

$$\textcircled{y=16 \text{ in}}$$

1. If we know segment DE is parallel to segment BC, are triangles ADE and ACB similar? *no*

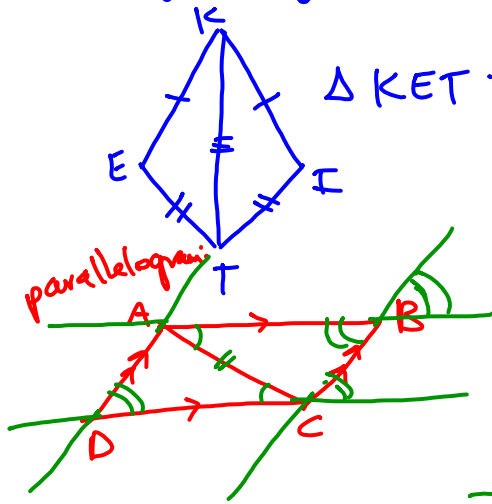

2. If we know triangles ADE and ACB are similar, is segment DE parallel to segment BC?

HW

Congruency/Similarity Wksht:

$\triangle KET \cong \triangle KIT$ by SSS.

by AAS,
 $\triangle BAC \cong \triangle DCA$

$\triangle SPA \cong \triangle DPM$
by SAS

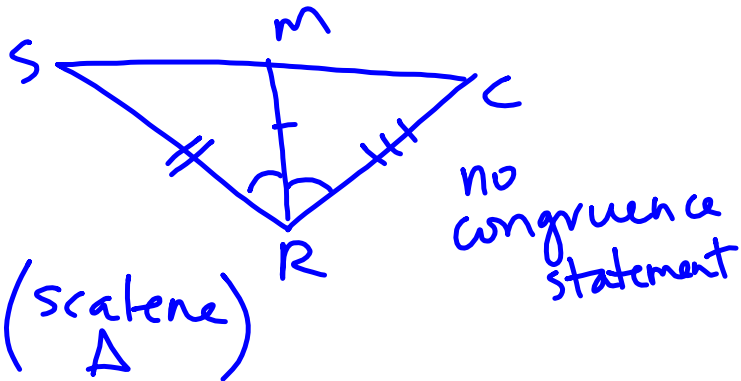

by AAS,
 $\triangle TOY \cong \triangle SYO$

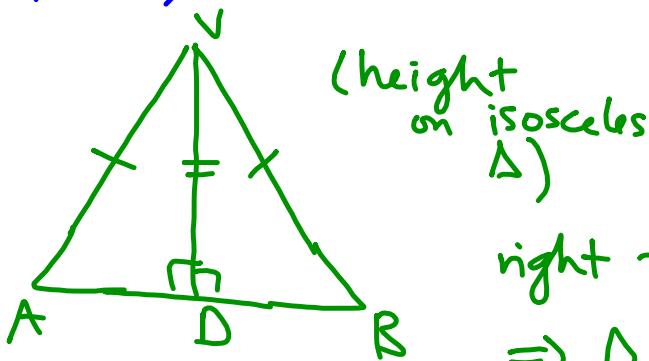

$\Rightarrow TO = SY$

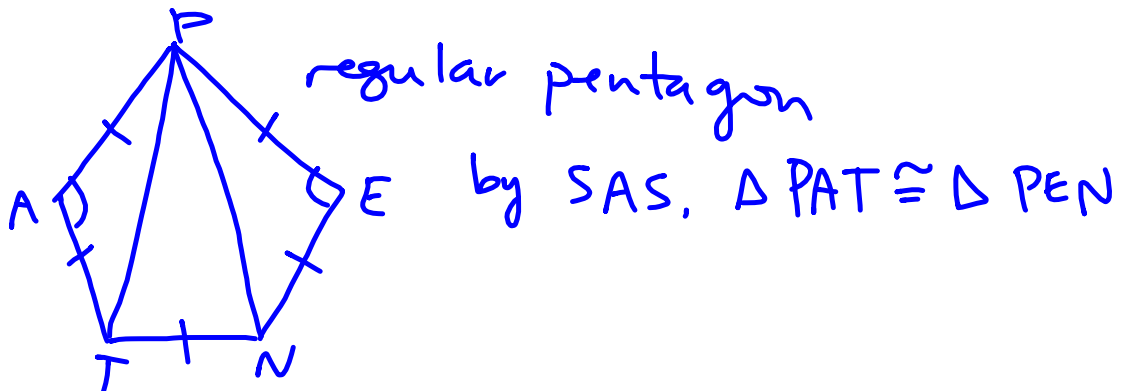

by AAS, $\triangle TMO \cong \triangle SMO$

no congruence statement

right triangle SSA case
 $\Rightarrow \Delta AVD \cong \Delta BVD$

12.4 #1

by SSS, $\triangle ABD \cong \triangle CBD$

$$\Rightarrow m\angle A = m\angle C$$

$$2m\angle 1 + 2m\angle 2 = 360^\circ$$

$$\text{and } 2m\angle 1 + 2m\angle 3 = 360^\circ$$

$$\Rightarrow m\angle 2 = m\angle 3$$

all corresponding angles
are same \Rightarrow rhombi are similar

Dilation

scale
by $\frac{4}{3}$

$$2\left(\frac{4}{3}\right) = \frac{8}{3} \\ = 2\frac{2}{3}$$
